The EPIK Sport project is a 24-month Erasmus+ Collaborative Partnership project that aims to improve the safety and well-being of children and youth in sports by developing an Educational Prevention and Intervention Kit (EPIK) training program for sports coaches and sports medicine students. The program aims to enhance their skills and competencies in injury prevention and management, promote collaboration, and provide a safe and supportive sports environment. The project's specific objectives are to develop a comprehensive and evidence-based EPIK training program, improve the skills and competencies of coaches and sports medicine students through pilot implementation, and develop evidence-based guidelines for implementing the EPIK program in sports organizations.
